Technical Interview Prep Guide (sample fixture)

Format: 60 minutes over video with a professional interviewer.
About 10 minutes: walk through a recent project you built and the tradeoffs you made.
About 45 minutes: two or three coding problems of increasing difficulty in a shared editor.
About 5 minutes: your questions.

Language: use any mainstream language you are comfortable with. Your code should run.
Topics that often come up: hash maps, strings, arrays, graphs and BFS/DFS, sorting,
and basic complexity analysis. No system design in this session.

Tips: think out loud, test your code with examples, and handle edge cases.
